Purpose
Update the current IT/IS infrastructure for a landscaping company.

Requirements
WIFI Capable within the companies work trucks in order to process payments
Smart devices (tablets or phones) to receive work orders, schedule job changes, clock-in/out
Provide a cost estimate.

Objectives

- **Identify different ways to equip Wifi to a truck**
- **Identify different tablet and smartphone options to meet requirements**
- **Identify prices and provide estimates with comparison to other landscaping companies**
- **Describe the long-term cost savings for the client**

WiFi In the field

Identify different ways to equip Wifi to a truck (Directly, hotspot, other)

Option 1

OnStar

Connected Vehicle Plan	Premium Plan
$24.99/mo.	$49.99/mo.
Emergency Services	Emergency Services
OnStar Guardian app	OnStar Guardian app
Unlimited In-Vehicle Data	Unlimited In-Vehicle Data
Remote Vehicle Access	Remote Vehicle Access
In-Vehicle Apps	In-Vehicle Apps

Summary

With the **OnStar** option 1 this will equip the vehicles with a service that connects directly to the vehicle and providing WiFi capabilities out in the field.

Pros

- Additional helpful services which could assist in case of emergency.
- 2 affordable monthly options that both provide the option for in vehicle data.
- Upfront cost are smaller

Cons

- Although the added benefits of the emergency features is a nice bonus, In this case it may not be needed or used often, not really justify the need for it at all.

Option 2

Business Mobile Voice and Data

T Mobile

MOST POPULAR $20/mo	$30/mo	$10/mo
Plan benefits:	**Plan benefits:**	**Plan benefits:**
• Unlimited talk, text & TE included • Up to 5GB high-speed data in CanMex • Up to 5GB high-speed internet in 215+ countries & destinations • $5 disc. Per line up to 8 lines w AutoPay & elig. Payment method	• Unlimited talk, text & TE included • Up to 10GB high-speed data in CanMex • Up to 10 GB High Speed Data • Up to 10GB high-speed internet in 215+ countries & destinations • $5 disc. Summary

With a mobile business plan option 2 there are a variety of plans that offer flexibility for needs.

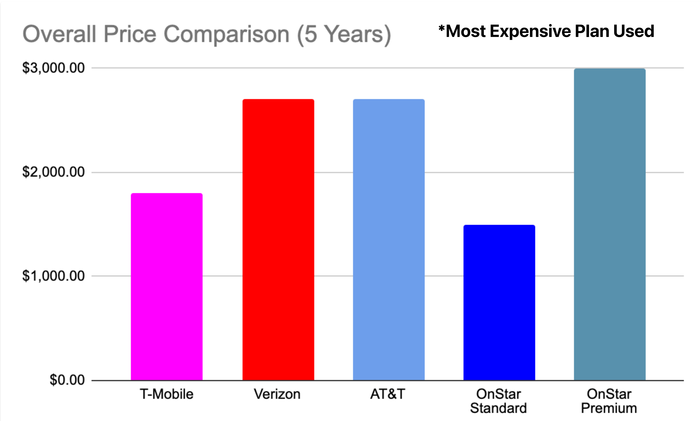
Pros

- Business lines will offer mobile hotspot enabling each employee to have WiFi wherever they are even if they are not near the vehicle
- Plans include discounts and promotions for devices, enabling the business to scale with the device (Apple or Android) that they choose.

Cons

- Upfront costs are larger
- Contracts are required to maintain the plan

Price Comparison



Proposed: After comparing the various options of WiFi in the field and comparing the capabilities of having WiFi solely in the vehicles or on each individual employee, I believe that even though over a 5 year period the OnStar standard version will be the cheapest option, a business contract with T-Mobile will make the most sense.

This is due to the capabilities of having WiFi per cellphone hotspot as opposed to needing to have a WiFi enabled vehicle around to be able to use the network. This option will assist in the future scalability of the business and turn out to be more cost effective in the long run.

Another thing to point out is that the OnStar price is per vehicle (1) over 5 years. While the mobile plan is for various lines of phones enabling WiFi via hotspot.

Conclusion: T-Mobile business plan is the option that makes most sense for the remaining requirements and scalability.
